THR

PLUGIN INSTALLATION GUIDE

In this guide you will learn how to install any THR plugin and how to find it in your DAW.

Important: The downloaded file will be a .zip file containing both the Windows and Mac installers.

In both cases, you need to double-click on the installer that corresponds to your Operating System to get the installation started.

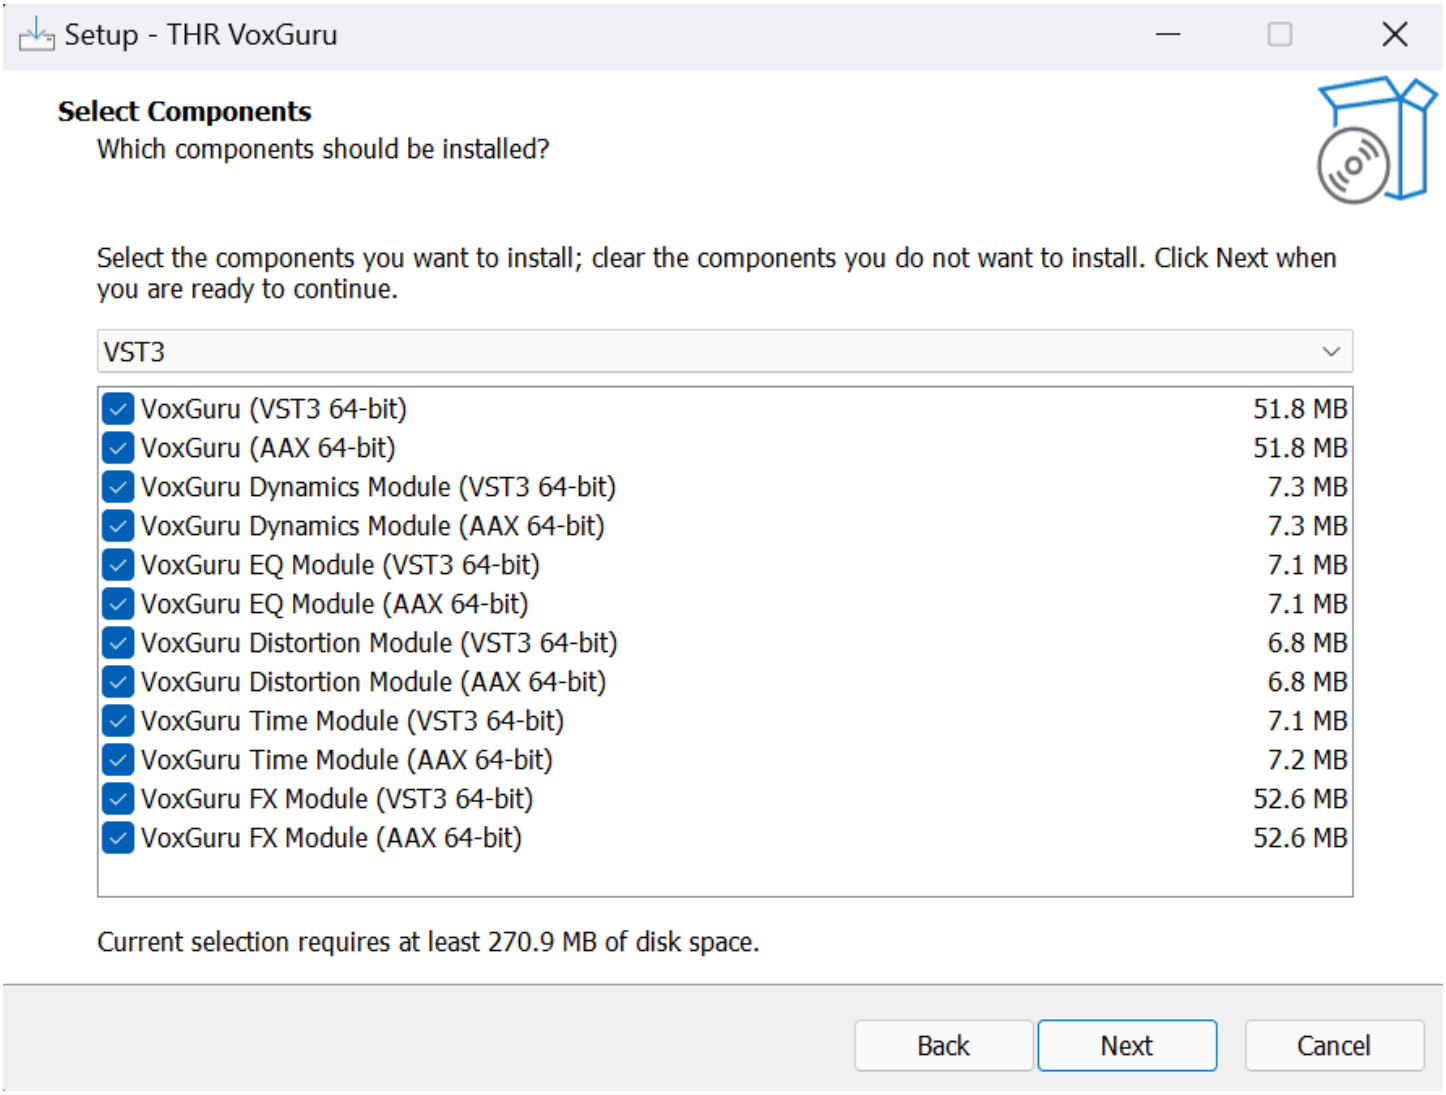

Short Installation Version:

Run the installer and simply click on next until it is finished. The installer will copy the plugins to the default folders that all DAWs use.

Below is a more in-depth guide for each Operating System.

Windows Installation

1. Run the installer (Recommended to run it as Administrator. Just right-click and choose “Run as Administrator”).
2. Accept the license agreement.
3. Select the components you want to install (Different Modules, plugin formats, etc.)

4. Finish the installation.

Windows Plugin Paths

The installer automatically copied the plugin files to the default Windows directories that most DAWs use by default.

This directory is: **C:\Program Files\Common Files\VST3**

Windows Presets Paths

This is the folder where the presets get installed to: C:\Users\Public\Documents\THR

MacOS Installation

1. Run the installer
2. Accept the license agreement.
3. Simply Click on “Next” Until the installation finishes.

Mac Plugin Paths

The installer automatically copies the plugin files to the default Mac directories that most DAWs use.

This directory is: **/Library/Audio/Plug-Ins/VST3**

Mac Presets Paths

This is the folder where the presets get installed to: **~/Library/Application Support/THR/**

Linux Installation

Plugin Paths:

Copy everything inside the VST3 folder into **~/.vst3** (create it if needed):

- mkdir –p ~/.vst3
- cp –r VST3/* ~/.vst3/

Preset Installation

Copy everything inside the Presets folder into ~/.config/THR:

- mkdir –p ~/.config/THR
- cp –r Presets/* ~/.config/THR/

Each plugin reads its presets from ~/.config/THR/<plugin name>/.

Presets not getting Installed?

In some very rare cases, the presets don't get copied to the presets folder depending on the permissions the user has.

In this case, manually download the presets and copy them to the presets folder.

Windows: **C:\Users\Public\Documents\THR\ copy them here**

MacOS: **~/Library/Application Support/THR/**

VoxGuru presets download link.

Plugin Activation Guide

In the downloaded .zip file for all plugins you will also find an activation guide that goes over all of the necessary steps to activate the plugin (Online or Offline) as well as how to solve activation issues.
